THE KIOSK PARTNER TEAM

ULTRA-SLIM WALL MOUNT KIOSK

Following a co-operation between an European and a Chinese company, an ultra slim wall kiosk can now be introduced.

The kiosk is recognized in the industrial computing industry and public applications for its user-friendly interactive SAW touchscreen interface, with high image clarity and anti-scratch features.

The professional Chinese manufacturer, SkyTouch Technology (of China) are selling various touch screen kiosks in more than thirty countries. The Kiosk Partner Team combines

this technology with a radical new design resulting in a new ultra-slim wall mount kiosk, which now is being launched.

This new ultra slim wall mount kiosk, will be introduced for use in various vertical market applications, such as internal usage programme/intranet, exhibition & showroom information terminals, industry sectors, libraries, in-store retail, tourist information & financial and educational institutions.

The wall mount principle will save floor space, ensure that

Special and customized components

the kiosk is theft proof, and prevent the possibility of the unit falling over – as traditional standing kiosk may be inclined to do. Utilizing superior craftsmanship and flexible manufacturing flow, by use of metal fabrication and assembly workshop equipped with Japanese and Chinese machinery, the Kiosk Partner Team have manufactured a streamlined, unique wall kiosk model. An internet service kiosk, sported with a stainless steel keyboard & integrated 38mm stainless steel trackball, advanced SAW touch screen and brilliant colour LCD panel, and an embedded indus-

trial computer, is equipped to satisfy internet computing needs of the public. The vandal proof Stainless Steel 67 key keyboard & trackball, integrated in a 20 degree downward slope form-fitted metal shelf, and high performance / low heat industrial computer, low power / low heat AC power supply is rightful for robust requirements of a public kiosk, of varied environments.

The new ultra slim wall kiosk is equipped with the a powerful Mini-ITX embedded mainboard, because its robust operation consumes little

power and generates minimal heat. Equipped with Intel® Pentium 4, Pentium M or Core™2 Duo Processor, 1GB Memory and 80GB HDD, this make the wall kiosk powerful enough to match even highest possible needs. The compact computer mainboard enables the new wall kiosk to have an impressive 70mm slim body.

PRESS RELEASE

19th of April 2007

ULTRA-SLIM WALL MOUNT KIOSK

The new wall kiosk will be available in May 2007. Through chosen distributors in Europe, the business of interactive self-service terminals will be available with a slimmer line, at an even better price!

The exclusive design, brilliant colour LCD and hi-fidelity speaker amplification system will ensure a fantastic user experience. The kiosk will be available in all RAL colours.

Due to the large 19" monitor (15" and 17" available), the kiosk is also suitable for digital signage when activated. Accessories like webcam, fingerprint-scanner, card readers etc. can be supplied on request.
